

MAHLE

EmissionPRO[®] Emission Control Line

MAHLE EmissionPRO®

The EmissionPRO® line fits all your needs for emission testing. It includes gas analysers and opacimeters for monitoring the exhaust system of petrol/diesel engined cars and also motorcycles. These devices do far more than standard measuring tools and are ideal for official inspections and tests on the composition of emissions. They comply with applicable national regulations.

Maximum
efficiency
for minimal
environmental
impact

Exhaust gas analysers

Exhaust gas analysers from MAHLE are designed for measuring the different exhaust gas concentrations in all engine types. They can be used for monitoring emissions in legally required inspections, for routine automotive servicing and also for repair.

Opacimeters

Our opacimeters for diesel engines are small and compact. Equipped with a 12 V power supply, the units are user friendly for workshops and also for mobile applications.

Particle Counters

A new technology that allows a great improvement in air quality.

Our particle counters are exceptionally accurate in measurement and extremely durable.

Designed to maximize the return of investment, they can be used immediately for the measurement of diesel engine emissions, but they're also ready for future regulations for gasoline engines.

RPM counter

The universal RPM counter for petrol and diesel engines transfers its real-time data values to the tester via Bluetooth or USB. RPM's and temperature are acquired from the device's standard sensors. Optionally, the device can collect vehicle RPM and temperature data using the OBD connector (EOBD-300 EVO wireless connector).

Modular and flexible: Our EmissionPRO® Line

- Modularity: you can configure your personal station by choosing MAHLE instruments, and connect them easily to the PC station
- Open system: compatible with all common commercial software and hardware systems
- Plug and play solution: we completely pre-configure and test all our exhaust examination testers
- Highest measuring accuracy
- Approved by several national regulations (in continuous development)

EmissionPRO® PMU 400

Thanks to the adoption of CPC technology - Condensation Particle Counter - MAHLE offers the market an extremely innovative product ready to adapt to all the evolutions and scenarios that may occur in the coming years. This, combined with the extreme care in the design and the quality of the materials, makes PMU 400 the most versatile and interesting particulate counter of the moment.

The new frontier in Emissions Control is signed by MAHLE

The Particulate matter

Particulate emitted from the latest internal combustion engines (both diesel and petrol) have a negative impact on air quality and health. Vehicles with a particulate filter that is not in perfect condition (tampered or broken), emits high concentrations of nanoparticles. These can easily enter the human body through the breath and the long-term effects of exposure to these particles are alarming.

The single nano-particle has a size at least 100 times smaller than the wavelength of visible light, so they're so small that cannot be counted or measured with traditional opacimeters.

CPC Technology

MAHLE has chosen to adopt the CPC - Condensation Particle Counter technology, which in addition to being particularly robust, allows high measurement accuracy even at low concentrations (difficult to obtain with other technologies).

This allows to dilute the sample coming from the exhaust pipe, with clean air (free of particulates) up to 200 times, in order to limit the deposition of particulate and dirt in the most delicate parts of the instrument (laser-scattering measuring bench), and to obtain long service intervals and simple maintenance operations.

PMU 400 is a particularly reliable instrument in measuring, while not giving up on the great ease of use by the operator.

Finally, this technology makes it possible to face the future evolutions of the anti-pollution regulations, which will require more stringent limits and greater measurement accuracy, as it will be easy to adapt the device, also thanks to the software developed by MAHLE.

Advantages at a glance

- Innovative and ready for any future scenario
- New design, forerunner to the EmissionPRO® Line of the future
- Guaranteed modularity: designed to be included in existing configurations
- Extreme precision of result, but maintaining absolute simplicity of use
- Few minutes to finish the test
- Robust and easy to service

Solid and compact: high-quality materials guarantee durability of the instrument, while the small dimensions, together with the practical ergonomic handle, keep it easy to handle.

The 3.5 m heated pipe allows you to operate with comfort even on trucks or in any working situation.

The work software allows you to integrate PMU 400 with any existing EmissionPRO® station.

The display clearly shows all the stages of the test as provided by the legislator, allowing you to easily fulfil all the steps that allow the quick closing of the test.

PMU 400 can be used both as a stand alone station, and perfectly integrated with other EmissionPRO® MAHLE stations, using the same software interface.

Measuring range			
Particulate size	23 ÷ 200	nm	
D50	23	nm	
Particulate Concentration (metrologically relevant)	0 ÷ 5M	#/ccm	Res. 100
Concentration (for diagnostic purposes)	0 ÷ 30M	#/ccm	Res. 100

EmissionPRO®

BMU 690

Advantages at a glance

- The RPM counter is incorporated via an induction clamp, capacitive clamp or optional wireless module RMU 300 (via bluetooth)
- Connection to a PC can be Serial, USB or Bluetooth (BT-100)

The BMU 690 analyses the gas from the exhaust pipe using the probe. By using the specified EmissionPRO® software, users benefit from every feature of the analyser. In addition, the user can easily switch from routine measurements to a legally specified test. Using high-precision technology, the BMU 690 analyses the absorption of the different elements CO, CO₂ and HC, and thereby determines their concentrations. Optionally Oxygen and NO_x concentrations can be measured via electrochemical sensors.

The condensate separator assembly is precision-molded to minimise the gas path and shorten maintenance times. The separation filter has two parts: a mesh filter and a coalescing filter. The design enables the continuous exit of condensate forming in the separator via a single-shaft and twin-head pump. In addition to the gas and air inlet for the autozero phase, the BMU 690 also features a special inlet for calibrating from a gas sample cylinder.

Measuring fields			
CO	0 ÷ 9,99	% vol	Res. 0.01
CO ₂	0 ÷ 19,9	% vol	Res. 0.1
HC hexane	0 ÷ 9,999	ppm vol	Res. 1
O ₂	0 ÷ 25	% vol	Res. 0.01
NO _x	0 ÷ 5,000	ppm vol	Res. 1
Lambda	0.5 ÷ 5		Res. 0.001
Revolutions Inductance/capacitance	300 ÷ 9,990	rpm	Res. 10
Oil temperature	20 ÷ 150	°C	Res. 1

Type-approval for Europe

- M Metrology Marking: MID (Measuring Instrument Directive) 2014/32/EU NMI 0122 B+D

Additional National Type-Approvals

- Italy, Morocco

EmissionPRO®

BMU 688

Advantages at a glance

- The RPM counter is incorporated via an induction clamp, capacitive clamp or optional wireless module RMU 300 (via bluetooth)
- Connection to a PC can be Serial, USB or Bluetooth (BT-100)
- The BMU 688 enables connection to the opacimeter via the OMNIBUS port. In this case, the analyser converts into a smoke density meter for diesel engines

The flexible BMU 688 gas analyser can operate easily in a workshop location and also function as a independent mobile device. Emissions are sampled at the exhaust pipe using the specially designed probe. With the intuitive interface users can easily switch between modes, i.e. from independent measurements to a legally specified test. The BMU 688 features six backlit LCD displays, clearly showing the readings of ongoing tests. When analysis is complete, the user can directly print out the test results or optional send them to a connected computer. The integrated condensate separator is designed to prevent an obstacle

in the gas flow and reduces maintenance costs. Its special design facilitates the continuous drainage of condensate that forms in the separator. The separation filter has two parts: a net filter and a coalescing filter. In addition to the gas and air inlet for the autozero phase, the BMU 688 also features a special inlet for calibration using a gas sample cylinder.

The rear side of the unit has connections for the power supply, for RPM and temperature probes, which can either in wired or wireless mode communicate to the PC.

Measuring fields			
CO	0 ÷ 9,99	% vol	Res. 0.01
CO ₂	0 ÷ 19,9	% vol	Res. 0.1
HC hexane	0 ÷ 9,999	ppm vol	Res. 1
O ₂	0 ÷ 25	% vol	Res. 0.01
NO _x	0 ÷ 5,000	ppm vol	Res. 1
Lambda	0.5 ÷ 5		Res. 0.001
Revolutions Inductance/capacitance	300 ÷ 9,990	rpm	Res. 10
Oil temperature	20 ÷ 150	°C	Res. 1

Type-approval for Europe

Additional National Type-Approvals

- Brazil, Hong Kong, Italy, Morocco, Serbia

EmissionPRO®

BMU 200

Advantages at a glance

- Automatic diagnostics: The program analyses the gas values and provides a list of individual readings
- Double lambda sensor test: With its oscilloscope feature, the unit analyses variations in the signal and calculates an operating efficiency value
- Cylinder head leak test: The program guides the user through the test and, by analysing the gases in the coolant expansion tank, is able to determine whether the cylinder head gasket is leaking or not

The BMU 200 exhaust gas analyser can be connected to a PC via serial port. The unit communicates automatically with the test vehicle for collecting and saving the required test data e.g. temperature and speed. With its minimal dimensions, this unit is ideal for mobile use and to integrate in your existing station. Provided with proprietary MAHLE software running on a PC, it allows various diagnostic operations that help the operator in evaluating the vehicle's exhaust gas.

Gas curve

The unit automatically records the gas readings at different engine speeds and plots the data in a chart. This chart can be used as a gas curve. It's the perfect equipment for road tests and workshop testing.

Catalytic converter efficiency

The program guides the user through the test and calculates the efficiency of the catalytic converter for the different types of gas in percent – both pre and post the catalytic converter.

EmissionPRO®

RMU 300

Advantages at a glance

- Neural Network Technology: easily identifies and isolate noise, which could affect the accuracy of the measurement
- Extreme measurement precision

The RMU 300 is MAHLE's universal RPM counter that transmits engine RPM and temperature to the receiver via Bluetooth. RMU 300 records the rotation frequency based on harmonics of the engine, according to battery charging signal or via a magnetic vibration sensor, and the engine temperature via the standard temperature sensor. The built-in rechargeable battery eliminates the previous need of the old RPM counter's for cables to connect to the car battery. The user-friendly software provides comprehensive, clearly organised information of the signal quality, current readings, and transmission quality of the signals to the receiver. Using the optional EOBD-300 EVO the engine speed can also be recorded via OBD interface via Bluetooth.

The RMU 300 can be connected to a PC via a USB cable (included) or via Bluetooth.

The SG-030 (specified for motorcycles) records RPM using phono-metric measurements. Due to highly precision it can also be used in particularly complicated situations (ex. for trucks).

Signal recording options:

- Vibration sensor
- Alternator harmonics
- EOBD connector (EOBD-300 EVO) for speed and temperature

Measuring fields			
RPM	300 ÷ 9,990	rpm	Res. 10
Temperature	20 ÷ 200	°C	Res. 1

EmissionPRO® DMU 300

Advantages at a glance

- Open system: compatible with all common commercial software and hardware systems
- Plug and play solution: we fully pre-configure all our exhaust examination testers. Ready to use

The DMU 300 is designed for flexibility and ease of use and can be connected to a PC via serial interface. The user-friendly MAHLE software guides even untrained users safely and intuitive through the emission testing process.

Like many other devices in this series, the DMU 300 opacimeter can also be incorporated in various MAHLE emission control configurations, enabling users to

set up a testing station based on their individual requirements.

It can also be integrated in existing stations (on a MAHLE trolley for example), and therefore fits harmoniously and stylistic in workshops that use MAHLE equipment.

Measuring fields			
Light transmission	0 ÷ 99,9	%	Res. 0.1
Light transmission	0 ÷ 9,99	m ⁻¹	Res. 0.01
Rev counter	300 ÷ 9,990	RPM heat.	Res. 10
Oil temperature	20 ÷ 150	°C	Res. 1
Smoke temperature	20 ÷ 400	°C	Res. 1

Compliance

- ISO 11614 Standards

National Type-Approvals

- Bulgaria, France, Italy, Morocco, Netherlands, Romania, Serbia

EmissionPRO® DMU 100

Advantages at a glance

- Guaranteed modularity: Designed to integrate in your customized testing station. This ensures flexibility and meets your specific needs
- Extreme measurement precision

Small and compact: Thanks to its small dimensions, 12V power supply and comfortable ergonomic handle, the DMU 100 is ideal for mobile use. The opacimeter can be connected to a PC via serial port.

The measuring device has an integrated heated measuring chamber with a length of 20 millimeters. The unit tests according to the reference method, whereby a second opacified glass is used as a

measurement reference.

The exhaust probe includes additional adapters for passenger cars and trucks.

With the specially developed MAHLE software, you can use the DMU 100 to work with all brands and models.
